

## Saw technology for your success

When Kampmann was founded in 1927, the business activities were based on trading with different types of tools and circular saw blades for the steel and tube industry. The company could quickly expand its knowledge and specialize in the development and production of carbide tipped saw blades. Not only the production, but also the maintenance of our high tech saw blades is taken for granted from our clients.

In 1992 important changes, a highly modern saw blade production plant let the Kampmann GmbH become one of the leading manufacturers of cutting tools, mainly for the steel industry. As the globalization proceeds and as our company attaches importance to stay in direct contact with our clients, we are now an internationally active company with branches and production centers in France and Brazil.

End of 2009 the company moved in a new plant in Hamm, Germany. This factory is now specially equipped with a production line for high speed tungsten carbide tipped circular saw blades.

Today the Kampmann group employs about 75 qualified people who guarantee uniform quality and immediate maintenance of saw blades with different diameters and specifications.

## Product-range

Our product range includes the following types of saw blades:

- carbide tipped circular saw blades
- high speed tungsten carbide tipped circular saw blade
- high speed steel (HSS) circular saw blades
- segmental circular saw blades
- hot and friction circular saw blades
- high speed steel (HSS) – DIN circular saw blades

## Services

- experience with circular saw blades for more than 80 years
- specialized in cutting steel with carbide tipped saw blades
- customized cutting solution
- sharpening-, repair- and pick-up-service with our own truck-fleet
- visionary machine concepts from HAGE Austria
- microlube ADVANTAGE coolant and lubricant systems

## Main area of using

- single cut sawing machines
- tubes and structural steel shapes sawing machines
- tubes and structural steel shapes layer sawing machines
- steel plates sawing machines dimension up to  $\varnothing$  2000 mm
- tube and structural steel shapes flying cutter machines
- low carbon mild steel
- alloy steel in solid bars
- all automatic mass circular sawing machines

## Main industrial sectors

- Automotive industry
- Precision tube industry
- Steel mills
- Rolling mills
- Forging industry
- Rail producers
- Wage working companies in the steel sawing sectors

## A.P.A.S. system

### Custom-tailored and specific problem solutions

#### Analysis of your sawing processes

The technicians of Kampmann GmbH collect information about your sawing process on the spot and discuss your specific problems and process requirements.

#### Projects

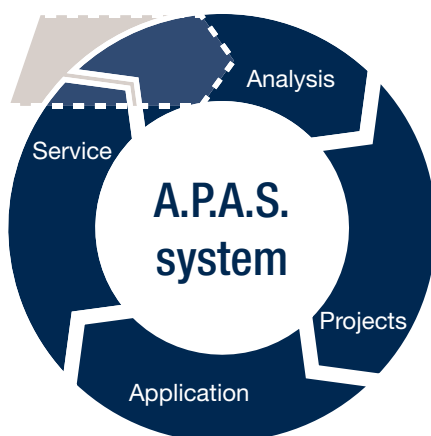

Based on the analysis and in cooperation with you, the technicians of Kampmann GmbH develop a project to increase your cutting and quality performance.

#### Application

After defining the right geometry and design of the saw blade for your purposes the tool will be tested by the technicians of Kampmann GmbH on the spot and the cutting parameters will be optimized.

#### Service

Based on your requirements we define a regular service term for your saw blades. Continuous assistance by the technicians of Kampmann GmbH ensures a long-term success.

## ***HAGE* - Mission Statement**

We implement creative ideas through automation of operational procedures. We guarantee technical know-how aiming at target-oriented support. Through visionary and innovative installation concepts we secure your competitive lead by supplying custom-made „all in one hand“ solutions - with regard to your economic and ecological environment. *HAGE* ... „Your automatic advantage“

## ***HAGE* - Vision**

Our world-wide realisation of leading-edge installations is based on long-standing experience as well as on our constant striving for innovative concepts. When it comes to economical and technical challenges our creative and highly qualified staffs are strongly motivated to meet our customers' most sophisticated requirements.

## **microlube** *ADVANTAGE*

for lubricants HLM 40, HLM 50, HLM 70, HLM 100 and others, and emulsion medium for supplementary cooling

### System description

**microlube** *ADVANTAGE* is a modular MQL system, and can be adapted at any time to suit your application – all you need are the relevant modules.

**microlube** *ADVANTAGE* is not limited to any specific application, and can be adapted to individual customer requirements thanks to the newly developed module technology.

## MMKS-System **microlube** *ADVANTAGE NETWORK*

**microlube** *ADVANTAGE NETWORK* is a modular two-line MQL central lubrication system for extreme applications and large systems and can be adapted at any time to suit your application. All you need are the relevant modules and network adapter (active distributor).

**microlube** *ADVANTAGE NETWORK* is not limited to any specific application, and can be adapted to individual customer requirements thanks to the newly developed module technology.
